SUMMARY

Software Engineer experienced in shipping production systems across distributed data infrastructure and full-stack development, including data pipelines, backend services, and frontend interfaces.

PROFESSIONAL EXPERIENCE

New Relic, Senior Data Platform Engineer

Jul 2025 – present

- Leading migration of DBT Cloud and Snowflake to DBT Core with Spark, projected to save more than \$1M annually in compute and licensing.
- Designed and shipped an end-to-end billing test framework used by multiple teams to validate billing accuracy, reducing mean time to detect (MTTD) from months to ~1 hour.

New Relic, Data Platform Engineer

Aug 2024 – Jun 2025

- Engineered an Ingestion Framework for moving data from NRDB to Iceberg, involving a high throughput API caller, handling 2.5M+ daily calls, and onboarded 15+ use cases via dynamic Airflow DAGs, reducing pipeline build time from 2+ weeks to 2-3 hours to accelerate analytics delivery.
- Deployed and integrated Airbyte into New Relic's infrastructure.
- Built a custom connector using Fivetran SDK for ingesting data from Billing Platform to Iceberg.
- Designed and deployed comprehensive reliability dashboards with freshness and volume tests, proactively detecting 12+ potential incidents within 30 minutes (previously 2+ weeks), reducing PagerDuty alerts from 4 per week to 1 per month, and achieving 99.95% SLO.
- Managed ingestion from high-volume Kafka topics getting data around 65 GB/second to various destinations like Iceberg, S3 and Snowflake via Kafka Connect.
- Deployed Spark on Kubernetes using KubeFlow and authored 10+ batch and streaming jobs.

Goldman Sachs, Analyst (Full Stack Engineer)

Feb 2022 – Jul 2024

- Developed a pipeline for legacy data migration and implemented batch analytics using the firm's in-house data platform, marking the first successful implementation of this architecture in my division.
- Developed a versatile, robust Email Service for external communication, integrating with in-house object storage for handling attachments, and utilized multithreading for concurrent dispatch.
- Leveraged Webpack's Module Federation plugin to refactor monolithic frontends, breaking down shared components and state into unified libraries.

SKILLS

- **Languages:** Java, SQL, JavaScript / TypeScript, Python
- **Data:** Spark, DBT, Iceberg, Snowflake, Hadoop, Kafka, Kafka Connect, Airflow, KubeFlow, Fivetran
- **Cloud & Infrastructure:** Docker, Kubernetes, GitLab CI, AWS
- **Full Stack:** Spring Boot, Spring Security, Hibernate, ReactJS

EDUCATION

Manipal Institute of Technology,
Bachelor's Degree in Computer Science
9.64 CGPA

May 2018 – Jun 2022 | Udupi, India
